WHAT YOU WANT

More Stylish

Every door is a designer creation, blending modern aesthetics with timeless detail.

More Eco-Friendly

Electrostatic powder coating with zero VOC — meets E1-grade environmental standards.

More Durable

High-strength aluminum alloy frame filled with high-density aluminum honeycomb core.

PRODUCT ADVANTAGES

WARPING

WHY ALUMINUM

A Better Door, By Every Measure.

Wood doors have a long history — but aluminum has quietly become the modern standard for interior doors. Engineered aluminum frames now match the warmth and beauty of timber while solving the problems wood has never quite shaken off.

ALUMINUM
MOISTURE RESISTANCE

Fully waterproof. Perfect for bathrooms, kitchens, wet zones.

DIMENSIONAL STABILITY

Holds true to spec across seasons — no expansion or contraction.

WEIGHT & STRENGTH

Aluminum honeycomb core: light yet structurally rigid.

TERMITE & PEST RESISTANCE

Inorganic — termites, borers, and mold have nothing to feed on.

FIRE PERFORMANCE

Non-combustible aluminum frame; meets stricter fire ratings.

SUSTAINABILITY

100% recyclable; low-VOC adhesives and zero-VOC finishes throughout.

TRADITIONAL WOOD

Swells, warps, and rots when exposed to humidity over time.

Expands in humidity, contracts in dry conditions; sticking common.

Heavy solid timber strains hinges; veneered hollow doors feel cheap.

Vulnerable to termites and wood-boring insects without treatment.

Combustible by nature; even fire-rated wood doors require heavy chemical treatment.

Old-growth timber loss; many panels are bonded with high-VOC glues.

DESIGN CONSIDERATIONS

Designed to Disappear, or Stand Out.

Aluminum doors give designers a vocabulary wood cannot match: concealed frames, ultra-slim profiles, true flush surfaces, and finishes that range from invisible to architectural statement.

01 **PROFILE & FRAME**

Choose between visible frames for warmth and definition, or concealed-frame systems that let the door sit flush with the wall — a look impossible with traditional timber.

03 **HARDWARE INTEGRATION**

Magnetic latches, invisible hinges, recessed pulls, and edge-lit handles install cleanly into machined aluminum sections — something solid wood rarely supports cleanly.

02 **FINISH & TEXTURE**

Aluminum accepts wood-grain wraps, fluorocarbon, brushed metallics, and stone-effect coatings — all the visual richness of timber, without the maintenance cycle.

04 **SOUND & PRIVACY**

A honeycomb core combined with full-perimeter seals delivers measurable acoustic separation between rooms — ideal for bedrooms, studies, and home offices.

LIFESPAN

Built to Last Decades, Not Years.

30+

YEARS

Typical service life of a quality aluminum door.

8–15

YEARS

Average lifespan of timber interior doors in tropical climates.

0

REPAINTS

Aluminum finishes never need stripping or re-coating.

OVER THE LIFETIME OF YOUR HOME

Across thirty years of ownership, a typical timber door is replaced two to three times — victims of warping, swelling, termite damage, or simply tired finishes. An aluminum door, by contrast, is fitted once.

MAINTENANCE CYCLE

Aluminum

Wipe clean with mild detergent. That's the entire routine.

Wood

Annual inspection, periodic re-staining, anti-termite treatment, hardware re-tightening, and replacement when fibers soften.

“Buy once. Specify well. Live with it for the life of your home.”

EZZOGENICS · COLLECTION

Built on Quality, Defined by Value

Refined craftsmanship that stands the test of time.

EZZOGENICS · FEATURES

ENVIRONMENTAL PROTECTION

Eco-friendly construction that protects what matters most.

ECO-FRIENDLY

EZZOGENICS · COLLECTION

The Invisible Door Series

Architectural concealment for extremely narrow profiles.

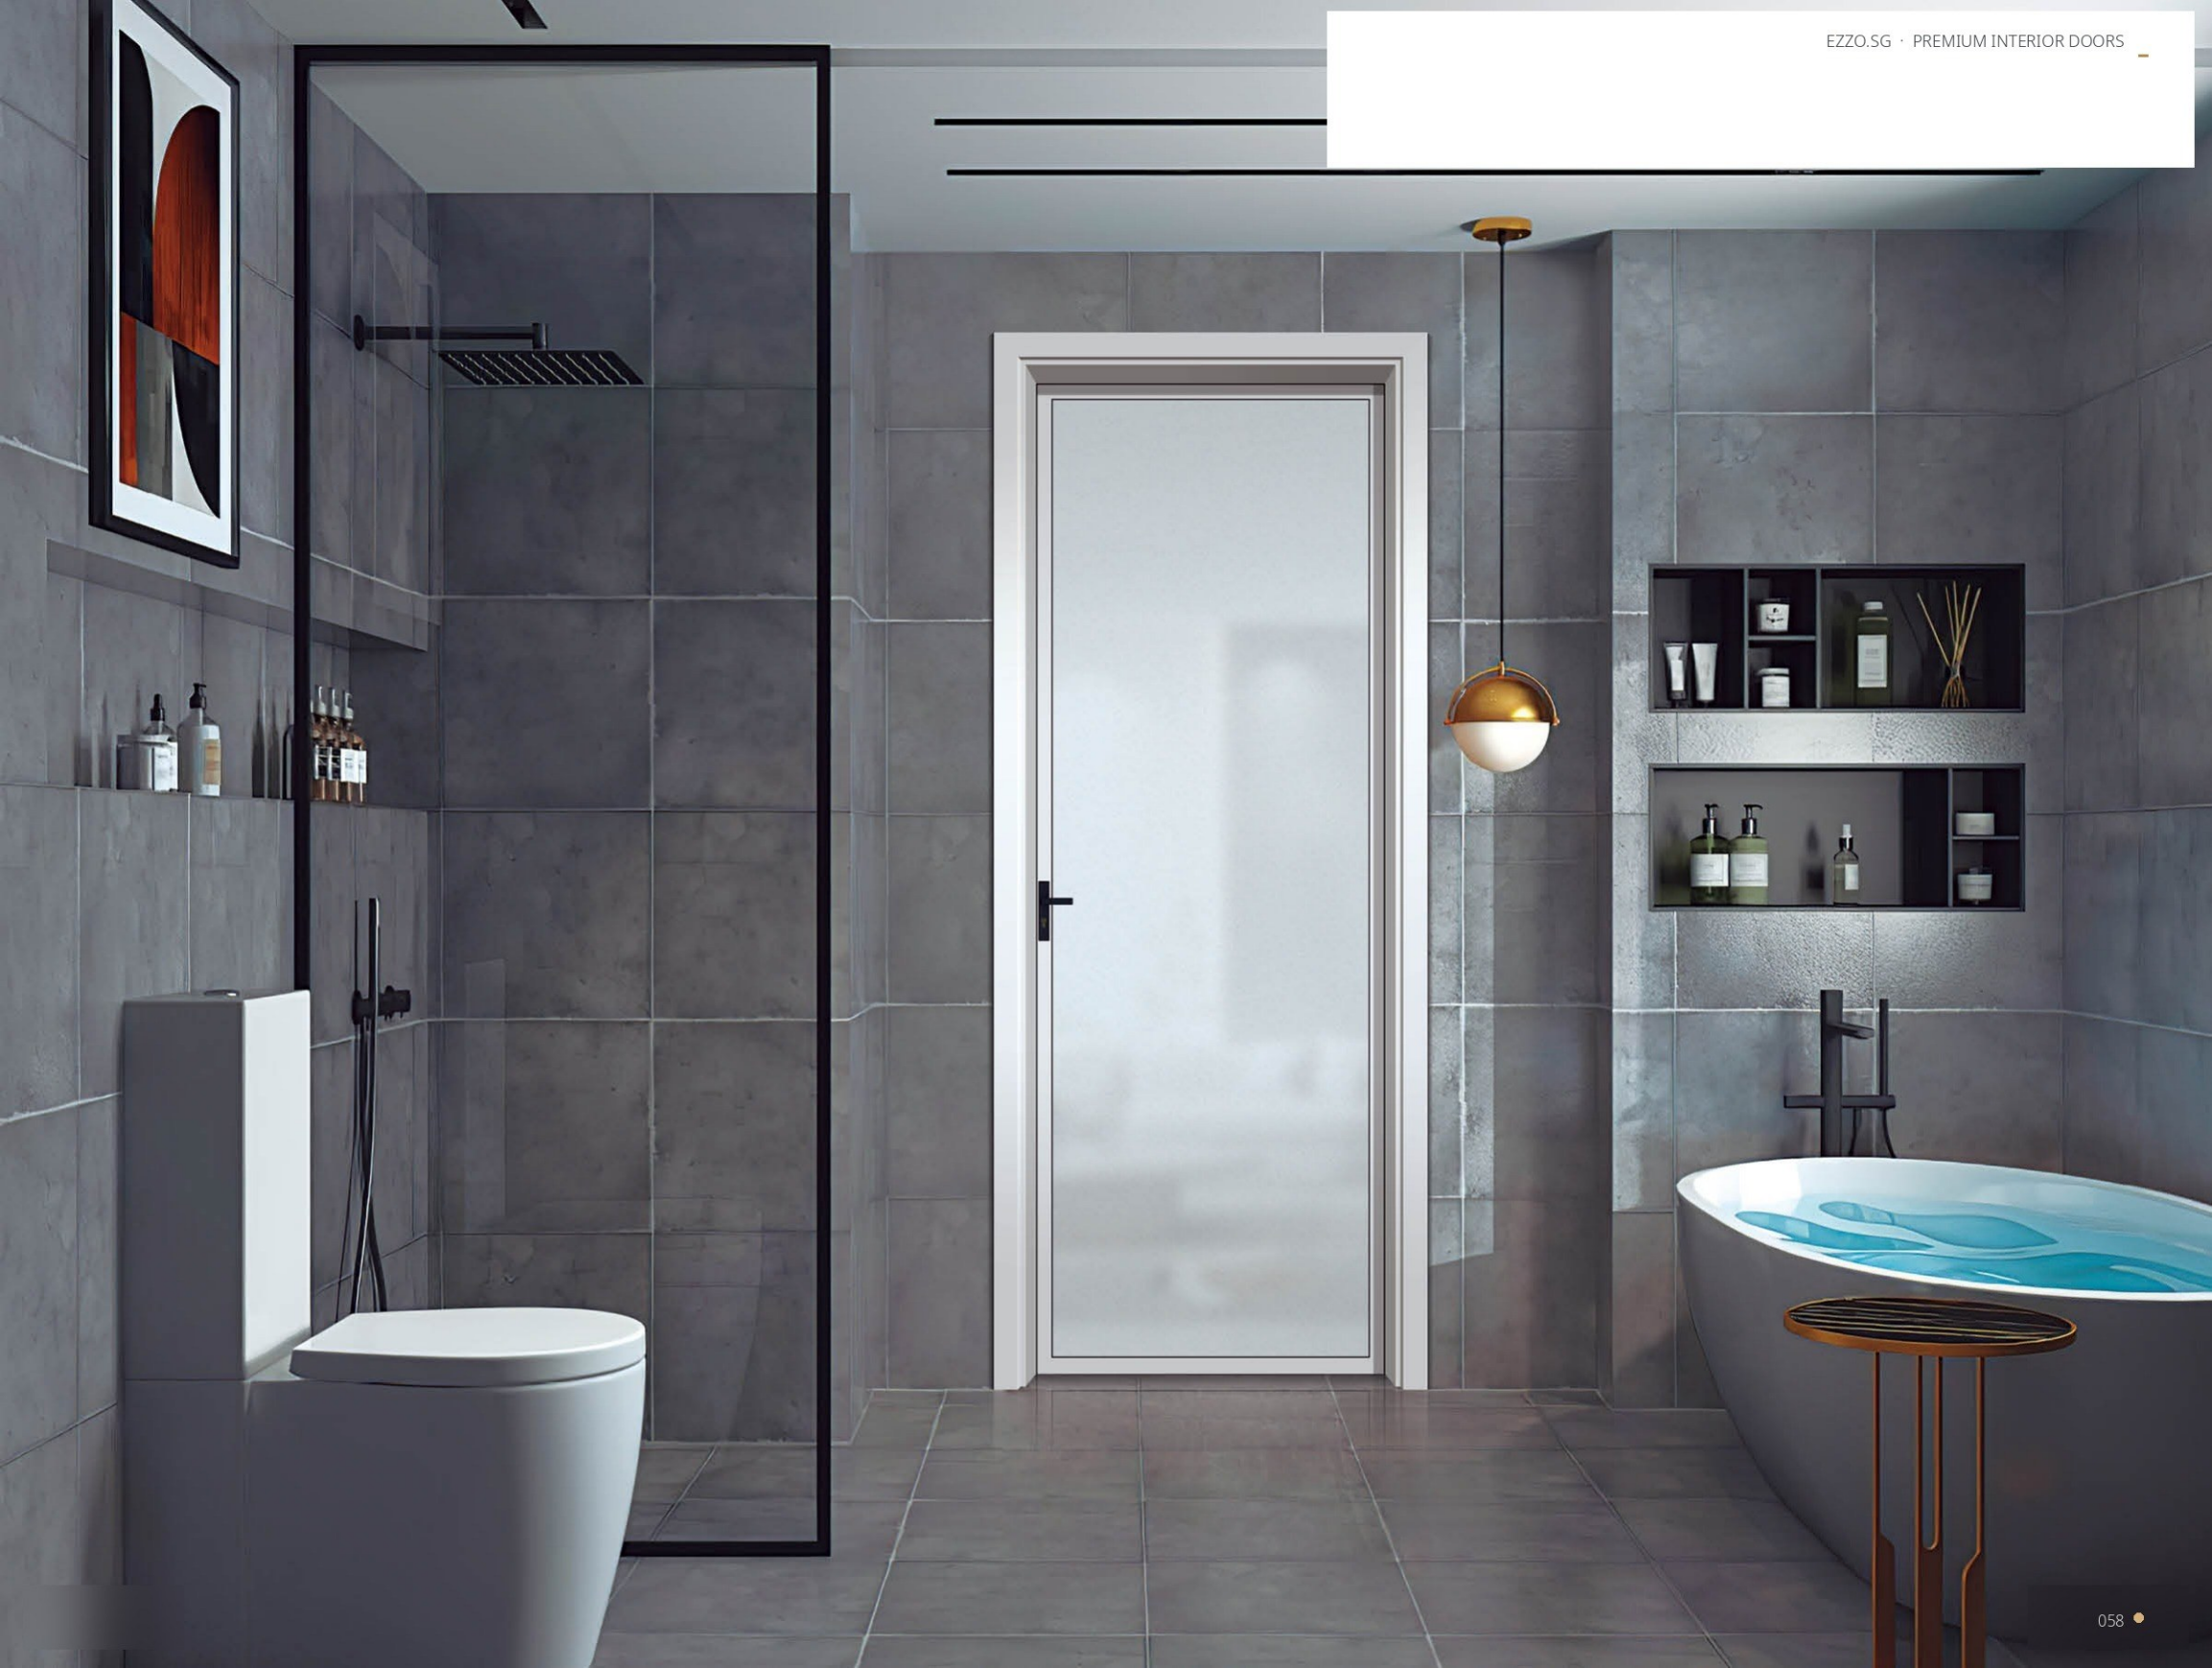

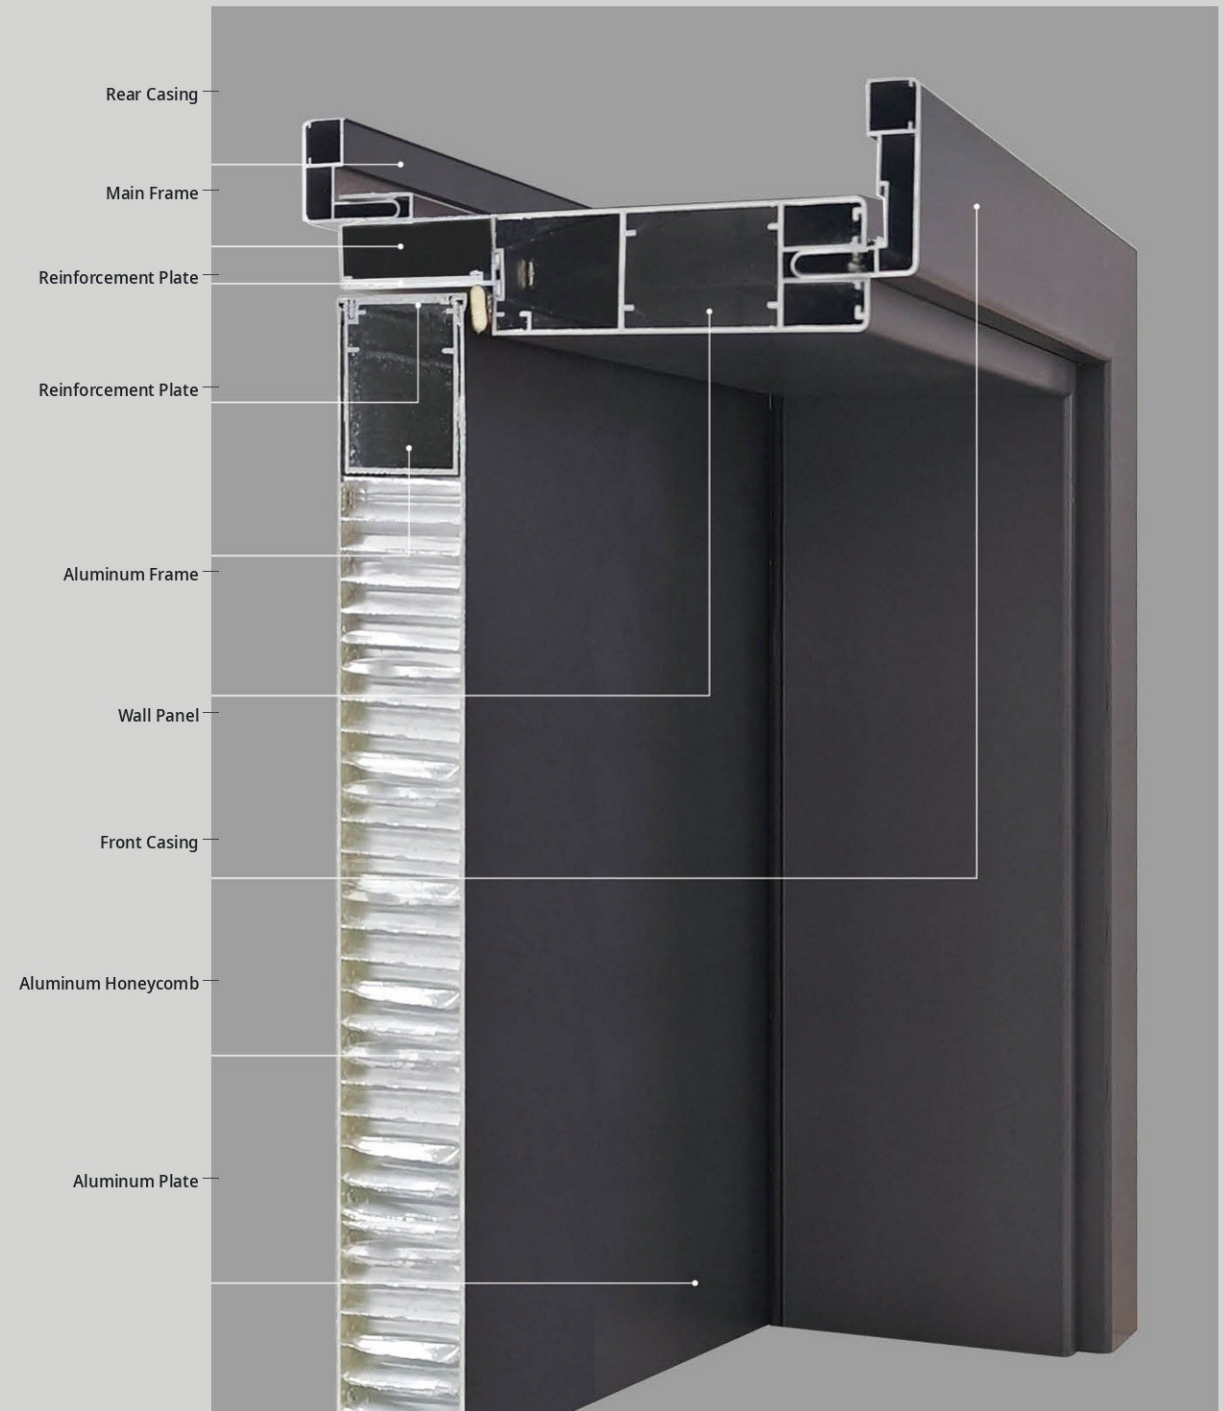

EZZOGENICS · ENGINEERING

Unique All-Aluminum Structure

A precision-engineered aluminum frame keel keeps every door panel perfectly flat, while a high-density aluminum honeycomb core delivers exceptional pressure resistance.

Reinforcement plates installed at hinge and lock positions ensure long-term durability — doors that never sag, warp, or shift out of alignment.

EZZOGENICS · FINISHES

Multi-Color Customization

Express your vision through an extensive palette of finishes.

Outdoor fluorocarbon, refined metallics, signature interior tones, and electrostatic powder coatings — every option is truly eco-friendly with zero VOC emissions.
